Ok, will do.

I don't have the location info for the Region 8 surface water data yet. I have data from the following locations from Region 8 for Surface Water. Do you want all of these included in the graphs? If so, could you please send me the location information? The figures you sent me earlier from Mark did not have the points labeled. Would it be better for me to go directly to Mark to get the location info?

Go as if validated.

I cannot tell if the Region 8 surface water data that I have is validated or not – there is not a field in the Scribe output that we received that indicates this. Do you want me to go ahead and use what I have or can Weston send me a new Region 8 surface water EDD that contains only validated data? (I do have the validated sediment data for Region 8)

Thanks,

Rebekha

Subject: maps with sample locations

Mark:

Attached are two maps showing the most recent sediment sample locations for R8 and the surface water sample locations for R6 (we're assuming sediment samples are co-located at the surface water locations). I did not label the sample locations in the zoomed in map... there are so many on top of each other that it's kind of messy at this scale. The information associated with each point is in the geodatabase, so we can label them with location or concentration when ready.

Please let me know if you need anything else with this.

Thanks,

Julie
